## General Description

The SAC3124 is a Ka-band GaAs MMIC power amplifier. The SAC3124 provides 25 dB of gain, and 35dBm of output power for 1 dB compression and 20%PAE from a +6V supply.

The chip has surface passivation for protection and backside via holes and gold metallization to allow a conductive epoxy die attach process. This device is well suited for communications, Point to Point radio and radar applications.

## Components List

Reference Des.	Value	Part Number	Manuf.	Size
C1~C4	2.2uF	GRM155R61A225KE15D	Murata	0402
C5~C14	300pF	—	ANY	SLC
C15~C18	1000pF	—	ANY	SLC
R1*	2.2Ω	—	ANY	0603

\* The value of R1 varies with the internal resistance of the gate bias circuit. When the internal resistance value of the gate bias circuit is less than 2Ω, R1=1 to 6.2 ohm is suitable.

## Notes

1. The SAC3124 is biased with a positive drain supply and negative gate supply. The recommended gate voltage is set to -0.7~-0.8V.
2. RF connections should be made as short as possible to reduce the inductive effect of the bond wire. Use of a 0.8 mil thermosonic wedge bonding is highly recommended as the loop height will be minimized. The RF input and output require a double bond wire as shown.
3. The backside of the SAC3124 is RF ground. Eutectic mounting is preferred, If using conductive epoxy, recommended epoxies is UNIMEC H9890-6A cured per the manufacturer's cure schedule. Epoxy should be applied in accordance with the manufacturers specifications and should avoid contact with the top surface of the die. An epoxy fillet should be visible around the total die periphery.
4. Bypass caps C1~C4 should be placed no farther than 1.5mm from the amplifier.
